## PREFACE

The Annual Report of the Trade of Canada for 1951 is published in three Volumes.

Volume I contains summary tables, analytical tables, and Canadian trade with each country by principal commodities.

Volume II contains exports by commodities and countries.

Volume III contains imports by commodities and countries.

On March 31, 1949, Newfoundland became a Province of Canada. Therefore, as from April 1, 1949, the trade of Newfoundland is included in the trade of Canada.

The Report was compiled in the External Trade Section of the International Trade Division under the direction of Mr. L. A. Kane, Chief.

*Dominion Statistician.*

DOMINION BUREAU OF STATISTICS,  
OTTAWA, CANADA.

## PRÉFACE

Le Rapport Annuel du Commerce du Canada pour 1951 paraît en trois volumes.

Le volume I contient des tableaux sommaires, des tableaux analytiques, et le commerce canadien avec chaque pays par principales denrées.

Le volume II donne les exportations par denrées et par pays.

Le volume III donne les importations par denrées et par pays.

Le 31 mars 1949, Terre-Neuve devient une province du Canada. Par conséquent, à compter du 1er avril 1949, le commerce de Terre-Neuve figure dans celui du Canada.

Le Rapport a été compilé par la Section du commerce extérieur de la Division du commerce international sous la direction de M. L. A. Kane, chef.

## EXPLANATORY NOTES

1. In all the tables of imports and exports in this Report, the quantities and values are based upon the declarations of importers (import entries) and of exporters (export entries), as subsequently checked by Customs officials.

2. Weight, where shown, is the net weight of the goods, that is, it excludes the weight of the covers or receptacles, except in cases of certain goods, as provided in the Customs tariff.

3. The expression "ton" means 2,000 pounds, and "cwt." 100 pounds, avoirdupois. Where other units of quantity are used, Imperial standards apply.

4. In this Report are trade items such as "Internal combustion engines and parts", etc., etc., which show both quantities and values. In this item "Internal combustion engines and parts" the quantity represents the number of "Complete engines" only, while the value represents not only the value of the specified number of complete engines but also the value of all kinds of "Parts" of engines; therefore, in this item, and in similar items, the average value per unit cannot be ascertained.

5. "Imports" means "Imports entered for Consumption". "Entered for Consumption" does not imply that the goods have been actually consumed in Canada, but that they have passed into the custody of the importer and that duty has been paid on the dutiable portion.

6. For statistical purposes, the value of merchandise imported, as shown in this Report, is the value as determined for Customs duty purposes. In most cases, this would be the invoice value of the goods converted to Canadian dollars at authorized exchange ratios. The value does not include charges such as freight, insurance, handling, duties or taxes.

7. "Exports of Canadian Produce" include not only articles of purely Canadian origin but also imported articles of foreign origin which have been changed in form or enhanced in value by further manufacture in Canada, such as sugar refined from imported raw sugar, and rubber goods made from imported unmanufactured rubber.

8. The value of "Exports of Canadian Produce" is the actual amount received in terms of Canadian dollars exclusive of freight, insurance, handling and other charges.

9. "Exports of Foreign Produce" consist of "Imports entered for Consumption" (see no. 5 above), which have been exported from Canada in the same condition as when imported. The value is the actual amount received in terms of Canadian dollars exclusive of freight, insurance, handling and other charges, when exported from Canada.

10. Imports into Canada are classified as received from the countries whence they were consigned to Canada. The countries of consignment are the countries from which the goods have come, without interruption of transit, except in the course of transshipment or transfer from one conveyance to another. The countries whence goods are consigned are not necessarily the countries of actual origin, since goods produced in one country may be purchased by a firm in another country and thence despatched, after a longer or shorter interval, to Canada. In such cases the second country would be the country of consignment to which the goods would be credited. An example is the case of tea grown in the Orient but purchased in the bonded market in London, England; Canadian statistics record such imports as coming from the United Kingdom.

11. Exports from Canada are credited to the country to which they are consigned, whether that country possesses a seaboard or not. The country of consignment is the country to which goods exported from Canada are intended to pass, without interruption of transit, except in the course of transshipment or transfer from one means of conveyance to another.

12. *Ports.*—The Table of the Trade of Canada, by Ports and Provinces, shows that merchandise was imported or exported at these ports; but this does not imply that goods imported at any port were for home consumption there or even in the province in which the port is situated, neither does it imply that goods exported at any port originated there or even in the province in which the port is situated.

13. The initials "N.O.P." mean "not otherwise provided for".

## NOTES EXPLICATIVES

1. Toutes les indications de volume et de valeur que l'on trouvera dans cet ouvrage sont basées sur les déclarations des importateurs et des exportateurs (documents d'importation et d'exportation), subséquemment vérifiées par les fonctionnaires des douanes.

2. Partout où il est question de poids, il s'agit du poids net des marchandises, c'est-à-dire que le poids des emballages, récipients, etc., n'y est pas compris, sauf certaines exceptions énumérées au tarif des douanes.

3. L'expression «ton» signifie 2,000 livres et «cwt.» (ou quintal) 100 livres avoirdupois. Lorsqu'on se sert d'autres unités, il convient d'adopter le standard impérial de poids et mesures.

4. Dans ce rapport on trouve des item comme «moteurs à combustion interne et leurs pièces», etc., etc., montrant les quantités et les valeurs. Dans le cas de «moteurs à combustion interne et leurs pièces» la quantité représente le nombre de «moteurs complets» seulement, et la valeur représente non seulement celle des moteurs complets mais aussi celle de toutes les «pièces» de moteurs; c'est pourquoi, dans cet item et autres semblables, il est impossible d'établir la valeur moyenne par unité.

5. «Importations» signifie «importations entrées pour la consommation». «Entrées pour la consommation» n'implique pas que ces marchandises sont nécessairement consommées au Canada, mais qu'elles ont été livrées à l'importateur qui a payé les droits sur telle partie imposable de ces marchandises.

6. Pour des fins de statistique, la valeur des marchandises importées indiquée dans le présent rapport est celle qui a été déterminée pour fins de droits de douane. Dans la plupart des cas, cette valeur sera la valeur de facture des marchandises, convertie en dollars canadiens au taux autorisé du change. Elle ne comprend pas les frais tels que le fret, l'assurance, la manutention, les droits ou taxes.

7. Les «exportations de produits canadiens» comprennent non seulement les articles d'origine purement canadienne, mais aussi les articles importés d'origine étrangère qui ont été modifiés dans leur forme ou augmentés en valeur par une plus ample transformation au Canada, comme le sucre raffiné après avoir été importé à l'état brut, les articles fabriqués avec du caoutchouc brut importé.

8. La valeur des «exportations de produits canadiens» est le montant réel reçu, exprimé en dollars canadiens, à l'exclusion du fret, des assurances, de la manutention et des autres frais.

9. Les «exportations de produits étrangers» comprennent les «importations entrées pour la consommation» (voir le n<sup>o</sup> 5 ci-dessus) qui ont été exportées du Canada dans le même état qu'à leur entrée. La valeur est le montant réel reçu, exprimé en dollars canadiens, à l'exclusion du fret, des assurances, de la manutention et des autres frais, quand les marchandises sont exportées du Canada.

10. Les importations au Canada sont attribuées aux pays d'où elles ont été consignées au Canada. Les pays de consignation sont les pays d'où viennent les marchandises, sans autre interruption de transit que les transbordements inévitables. Les pays d'où les marchandises sont consignées ne sont pas nécessairement les pays d'origine, car les marchandises produites dans un certain pays peuvent avoir été achetées par une firme d'un autre pays, d'où elles peuvent être expédiées au Canada après une période plus ou moins longue. Dans ce cas, l'attribution de ces marchandises est faite au second pays, considéré comme pays de consignation. Il en sera ainsi, par exemple, du thé récolté en Orient mais acheté sur le marché de Londres, Angleterre; les statistiques canadiennes considèrent ces importations comme venant du Royaume-Uni.

11. Les exportations du Canada sont attribuées au pays où elles sont consignées, même si ce pays ne possède pas de port de mer. Le pays de consignation est le pays que les marchandises exportées du Canada doivent finalement atteindre sans interruption de transit autre que les transbordements inévitables.

12. *Ports.*—Le tableau du commerce du Canada, par port et province, montre les marchandises importées ou exportées par ces ports, mais il n'en faut pas conclure que les marchandises importées par un port quelconque sont pour la consommation de la province où est situé le port, ou que les marchandises exportées sont produites par la province où est situé le port de sortie.

13. Les initiales «n.a.é.» signifient «non autrement énuméré».

## GOLD IN CANADIAN TRADE STATISTICS

The publication of statistics showing the gross imports and exports of gold has been temporarily suspended as from September, 1939. Statistics for periods prior to this time have been accordingly revised to exclude all gold formerly included in the total of merchandise exports.

Statistics showing the net exports of non-monetary gold, including changes in stocks held under earmark, are published as a supplement to the trade figures, and are given below.

Exports of gold in Canadian trade statistics were distinguished in previous reports as between monetary and non-monetary. Monetary gold exports were described as those which entailed a reduction in the Dominion's monetary gold stocks. All other gold exported (classified as non-monetary) were shown as merchandise, and included with the total merchandise exports.

The fact that gold is a money metal gives it peculiar attributes which distinguish it from other commodities in trade. In particular, the movement of gold in international trade is determined almost exclusively by monetary factors. The amount of exports may fluctuate widely from month to month owing to other than ordinary trade or commercial considerations. In addition, gold is generally acceptable. It does not have to surmount tariff barriers and is normally assured a market at a relatively fixed price. For these reasons, provision was made in previous trade reports for a supplementary table showing exports from Canada excluding all gold.

It is further to be noted that gold does not move in international trade in any direct or normal relation to sales and purchases. It may be bought or sold abroad without moving in or out across the frontier, the sales or purchases in such cases being recognized by simply setting aside or "earmarking" the gold in the vaults of the central bank. Trade statistics deal only with physical movements, sales or purchases of gold which do not involve an actual movement being more properly regarded as an "invisible item" and taken care of in the "International Balance of Payments" statements. Changes in the Bank of Canada's stock of gold under earmark do not enter, therefore, into the trade statistics.

## L'OR DANS LES STATISTIQUES DU COMMERCE CANADIEN

La publication des statistiques relatives aux importations et exportations brutes d'or a été temporairement suspendue depuis septembre 1939. Les statistiques pour les périodes antérieures à cette date ont été révisées en conséquence, de manière à exclure tout l'or qui entrerait auparavant dans le total des exportations de marchandises.

Les statistiques montrant les exportations nettes d'or non monétaire, y compris les changements dans les stocks affectés, sont publiées comme supplément aux chiffres sur le commerce et sont données ci-dessous.

Dans les rapports précédents les exportations d'or dans les statistiques du commerce canadien comprenaient l'or monétaire et l'or non monétaire. Les exportations d'or monétaire y étaient décrites comme celles qui entraînent une diminution des stocks d'or monétaire du Dominion. Toutes les autres exportations d'or (classifié comme non monétaire) étaient regardées comme marchandises et comprises dans les exportations globales de marchandises.

Le fait que l'or est un métal-monnaie lui donne des attributs spéciaux qui le distinguent des autres denrées dans le commerce. En particulier le mouvement de l'or dans le commerce international est déterminé presque exclusivement par des facteurs monétaires. Le volume des exportations peut largement fluctuer d'un mois à l'autre à cause de considérations autres que celles de l'échange et du commerce ordinaires. En outre, l'or est généralement acceptable. Il n'a pas à surmonter les barrières tarifaires, et un marché lui est normalement assuré à un prix relativement fixe. Pour ces raisons les rapports antérieurs sur le commerce fournissaient un tableau supplémentaire sur les exportations canadiennes, à l'exclusion de l'or.

De plus, il faut observer que dans le commerce international l'or ne se déplace pas en relation directe ou normale avec les ventes et les achats. Il peut s'acheter ou se vendre à l'étranger sans entrée ou sortie à la frontière; en ces cas, les ventes ou les achats sont reconnus en mettant simplement de côté ou en «affectant» l'or dans les chambres fortes de la banque centrale. Les statistiques du commerce n'ont trait qu'aux mouvements physiques; les ventes et les achats d'or qui ne comportent pas un mouvement réel sont plus proprement regardés comme un «item invisible», et ils prennent place dans les états de la «Balance des paiements internationaux». Les changements dans les stocks d'or affecté de la Banque du Canada ne paraissent donc pas dans les statistiques du commerce.

\* In this classification the expression "Canadian Farm Products" refers, in the case of Exports, to commodities actually produced in their original form on Canadian farms. In the case of Imports, it covers all commodities of which the basic raw materials are such as Canadian farms produce. "Foreign Farm Products" covers, in both Imports and Exports, materials or commodities such as Canada does not produce, e.g.—cane sugar, tea, rubber, cotton, silk, etc.

\* Dans cette classification, l'expression "Produits des fermes canadiennes" couvre, pour les exportations, toutes les denrées provenant à leur état brut de la ferme canadienne. Dans le cas des importations, elle couvre toutes les denrées dont la matière première est de celles produites par les fermes canadiennes. L'expression "Produits des fermes de l'étranger" couvre, aux importations et aux exportations, les matières premières qui ne sont pas produites au Canada, telles que le sucre de canne, le thé, le caoutchouc, le coton, la soie, etc.

## VALUE, PRICE AND VOLUME INDEXES OF EXPORTS AND IMPORTS

Changes in the value of exports or imports between two periods may be caused by variations in the quantity or volume of goods, exported or imported, by fluctuations in the price at which trade is transacted, or by a combination of these factors. If the general level of prices should rise between two periods this will tend to increase the value of trade in the second period even in the absence of an increase in the volume of goods bought and sold. A decline in the price level will tend to depress trade values. Similarly, quantity changes may affect trade values in the absence of price change. When prices and quantities change in the same direction they will produce very sharp value changes in that direction. Or prices and quantities may change in opposite directions, which may cause values to increase while quantities decrease, or quantities to increase while values decrease. To assess properly the meaning of changes in the value of trade it is therefore necessary to know the individual influence of price and volume movements on the value totals.

Table 38 presents a comparison of the declared (statistical) values of domestic exports and imports in current dollars and in constant dollars, together with annual indexes of the declared values, prices and physical volume of Canada's trade. Tables 39-44 present the monthly record from July, 1945, of the value, price and volume indexes published regularly in the Trade of Canada monthly reports<sup>(1)</sup>. Pending the selection of a suitable post-war general reference base by the Bureau of Statistics, these indexes are computed with 1948 as an interim reference base. Monthly indexes have not been calculated for the period prior to July, 1945, but an annual record from 1926 has been published<sup>(2)</sup>.

These indexes are computed in the following manner. The value index expresses the value of trade in a given period as a percentage of the value in the base period. The price index is of the fixed-weight aggregative (Laspeyre) type, and combines unit values calculated from the trade statistics with specified wholesale or other price quotations. These latter quotations are used where inadequate quantity reporting in the trade statistics prevents the obtaining of sufficiently representative unit value series. The volume index is then derived by dividing the value index by the corresponding price index, and is, therefore, of the currently-weighted (Paasche) type. The relationship between these series is thus multiplicative, not additive. The constant dollar values of Table 38 are computed by dividing the declared values by corresponding price indexes. As division by the published Laspeyre price indexes yields constant dollar values in which the groups do not sum to the total, for this computation a separate price index of the moving-current-weight (Paasche) type has been used.

In computing the price index certain minor adjustments were made to the regular grouping of commodities used in the trade statistics, and all three indexes are presented on the basis of these adjusted groups. The adjustments are as follows: the groups "agricultural and vegetable products" and "animals and animal products" have been combined into one group now titled "agricultural and animal products"; the sub-group "rubber and its products" has been transferred to the "miscellaneous products" group; and ships have been transferred to the "iron and steel and products" group. Other adjustments (to imports only) are the transfer of plumbing and heating equipment to the "non-ferrous metals and products" group, of phosphate rock to the "chemicals and fertilizer" group, and of advertising matter to the "miscellaneous products" group. Two items, "imports for the use of the United Kingdom government" (9194) and "imports for the use of British or N.A.T.O. countries" (9196), have been deducted from "miscellaneous products" (imports) and total imports; otherwise the totals to which the indexes apply are those elsewhere published in the trade statistics.

Some of the transactions recorded in the miscellaneous products group are unilateral in character or have characteristics which require special treatment for such purposes as calculations of the balance of payments or the national income. These are segregated in a special sub-group "miscellaneous special and non-commercial transactions", and the annual figures in Table 38 give separate values for this sub-group. It is not separately listed in the monthly tables because of its minor importance.

## INDICES DE LA VALEUR, DES PRIX ET DU VOLUME DES EXPORTATIONS ET DES IMPORTATIONS

Les changements de la valeur des exportations ou des importations d'une période à l'autre tiennent soit aux variations de la quantité ou du volume des marchandises exportées ou importées, soit aux fluctuations du prix pratiqué, soit à la conjugaison de ces deux facteurs. Si le niveau général des prix augmente d'une période à l'autre, la valeur du commerce de la seconde période aura tendance à augmenter même si le volume des marchandises achetées ou vendues n'augmente pas. Si le niveau des prix baisse, la valeur du commerce aura tendance à baisser. De même, les changements de la quantité peuvent, sans que les prix changent, modifier la valeur du commerce. Lorsque les prix et les quantités évoluent dans le même sens, il en résulte de très vifs changements de valeur dans ce sens. Enfin, les prix et les quantités peuvent évoluer en sens contraire et alors les valeurs augmentent tandis que les quantités diminuent ou bien les quantités augmentent tandis que les valeurs diminuent. Pour apprécier pleinement la portée des changements de la valeur du commerce, il faut donc connaître l'effet particulier du mouvement des prix et du volume sur la valeur totale.

Le tableau 38 compare la valeur (statistique) déclarée des exportations domestiques et des importations en dollars valeur courante et en dollars valeur constante et donne les indices annuels de la valeur déclarée, des prix et du volume physique du commerce canadien. Les tableaux 39-44 donnent depuis juillet 1945 les indices mensuels de la valeur, des prix et du volume publiés régulièrement dans les rapports mensuels portant sur le commerce du Canada<sup>(1)</sup>. En attendant que le Bureau de la statistique adopte une base de référence générale propre à l'après-guerre, ces indices se fondent sur 1948 comme année de référence provisoire. Il n'existe pas d'indices mensuels pour la période antérieure à juillet 1945, mais un état annuel à compter de 1926 a déjà paru<sup>(2)</sup>.

Voici comment sont établis ces indices. L'indice de la valeur exprime la valeur du commerce d'une période donnée en pourcentage de la valeur de la période de base. L'indice des prix est un indice collectif à coefficient fixe (type Laspeyre) et combine les valeurs unitaires établies d'après la statistique commerciale avec certains prix de gros ou autres. Ces prix sont utilisés lorsque l'insuffisance de données quantitatives dans la statistique commerciale ne permet pas d'établir des séries de valeurs unitaires suffisamment représentatives. On obtient ensuite l'indice du volume en divisant l'indice de la valeur par l'indice des prix correspondant; l'indice du volume est donc un indice à pondération courante (type Paasche). Ces séries sont ainsi en rapport multiplicatif et non pas additif. On obtient les valeurs en dollars constants du tableau 38 en divisant les valeurs déclarées par les indices des prix correspondants. Comme la division par les indices des prix publiés (Laspeyre) donne des valeurs en dollars constants dont les groupes, si on les additionne, ne correspondent pas avec le total, on a utilisé pour établir ce calcul un indice des prix distinct à poids courant mobile (type Paasche).

Dans le calcul de l'indice des prix, on a apporté certains ajustements secondaires au groupement normal des denrées utilisé par la statistique commerciale et tous les trois indices se fondent sur ces groupes ajustés. Voici ces ajustements: les groupes "produits agricoles et végétaux" et "animaux et produits animaux" sont réunis en un seul groupe maintenant nommé "produits agricoles et animaux"; le sous-groupe "caoutchouc et produits" est passé au groupe "produits divers"; et les bateaux sont passés au groupe "fer et acier et produits". En outre, pour les importations seulement, l'équipement de tuyauterie et de chauffage est passé au groupe "métaux non ferreux et produits", la roche phosphatée, au groupe "produits et engrais chimiques", et les matières publicitaires, au groupe "produits divers". Deux postes, "Importations à l'usage du gouvernement du Royaume-Uni" (9194) et "importations à l'usage des pays britanniques ou membres de l'OTAN" (9196), sont supprimés des "produits divers" (importations) et des importations totales; hormis cela, les totaux que visent les indices sont les totaux figurant ailleurs dans la statistique commerciale.

Certains des échanges figurant dans le groupe des produits divers revêtent un caractère unilatéral ou comportent des particularités qui appellent un traitement spécial en ce qui concerne le calcul de la balance des paiements ou du revenu national. Ces échanges forment un sous-groupe spécial, "opérations spéciales et non commerciales diverses", et les chiffres annuels du tableau 38 font voir les valeurs particulières à ce sous-groupe. Ce sous-groupe ne figure pas séparément dans les tableaux mensuels à cause de son importance secondaire.

(1) Ces séries sont expliquées en détail dans "Indices des prix des exportations et des importations, par mois, juillet 1945—juin 1950 (1948=100)", Bureau fédéral de la statistique, 1950 (Document de référence n° 8).

(2) Les données annuelles antérieures se trouvent dans "Indices des prix des exportations et des importations, 1926—1948 (1935=100)", Bureau fédéral de la statistique, 1949 (Document de référence n° 5).

(1) The groups presented in these tables are adjusted to improve group coverage for pricing purposes. See notes at the beginning of these tables.

(2) Adjusted totals: Import trade content excludes imports for the use of the United Kingdom Government, temporary imports for exhibition or competition, gold; export trade content excludes exports of foreign produce, temporary exports for exhibition or competition, gold.

(3) Converted by Paasche price index. See explanatory notes.

TRADE BY THE STANDARD INTERNATIONAL TRADE CLASSIFICATION<sup>(1)</sup>

A serious difficulty for users of the trade statistics of more than one country results from the use by most countries of their own distinct statistical classifications of commodities. The League of Nations made an effort to solve this problem by publishing in 1938 its "Minimum List of Commodities for International Trade Statistics", but war intervened before this proposed international classification attained general use. The United Nations Statistical Commission decided at its third session to make a fresh attack on this problem, and under its direction a draft classification was prepared and circulated to the member governments for approval. After some revisions, the Statistical Commission in May, 1950, approved the Standard International Trade Classification, and urged national governments to make use of it either by adopting it as a primary classification for the compilation of their trade statistics or by converting national statistical data to the S.I.T.C. for international use. Canadian trade statistics are now being converted to the S.I.T.C. and current data are published, along with the statistics of other important trading countries, in the United Nations "Commodity Trade Statistics" series<sup>(2)</sup>.

Statistics showing Canadian Trade during the calendar years 1950 and 1951 are presented in the two following tables on the basis of the S.I.T.C. It should be noted that Table 46 relates to total exports (Canadian exports plus foreign exports), and that totals in both tables differ from those appearing in other tables of this report by the exclusion of processing charges and the small amount of commercial gold formerly included in Canadian trade statistics.

COMMERCE SELON LA CLASSIFICATION TYPE POUR LE COMMERCE INTERNATIONAL<sup>(1)</sup>

Une grave difficulté se présente à ceux qui font usage de la statistique du commerce de plus d'un pays du fait que la plupart des pays se servent de leur propre classification des denrées. La Société des Nations, cherchant à résoudre le problème, a publié en 1938 sa "Liste minimum des marchandises pour les statistiques du commerce international", mais la guerre éclata avant l'adoption générale de ce projet de classification internationale. A sa troisième session, la Commission de statistique de l'Organisation des Nations Unies décida d'aborder le problème sous un angle nouveau et fit préparer un projet de classification qu'elle soumit à l'approbation des États membres. Après certaines rectifications, la Commission de statistique a approuvé en mai 1950 la Classification type pour le commerce international et engagé les gouvernements nationaux à s'en servir soit comme classification de base dans l'établissement de leur statistique du commerce, soit en modifiant la présentation de leurs statistiques conformément à la nouvelle classification, de façon à permettre la comparaison internationale. Le Canada est déjà en voie de transformer sa méthode conformément à la C.T.C.I.; les données courantes, de même que celles des autres pays importants du point de vue du commerce, sont publiées dans le bulletin des Nations Unies *Commodity Trade Statistics*<sup>(2)</sup>.

Les statistiques du commerce canadien pour les années civiles 1950 et 1951 sont données dans les deux tableaux qui suivent, d'après la C.T.C.I. Il est à noter que le tableau 46 a trait aux exportations totales (exportations canadiennes et réexportations) et que les totaux des deux tableaux diffèrent de ceux des autres tableaux du présent rapport, puisqu'ils ne comprennent pas les frais de transformation et le faible montant d'or commercial, deux postes qui faisaient antérieurement partie de la statistique du commerce du Canada.

## EXPLANATORY NOTES

1. In all the tables of imports and exports in this Report, the quantities and values are based upon the declarations of importers (import entries) and of exporters (export entries), as subsequently checked by Customs officials.

2. Weight, where shown, is the net weight of the goods, that is, it excludes the weight of the covers or receptacles, except in cases of certain goods, as provided in the Customs tariff.

3. The expression "ton" means 2,000 pounds, and "cwt." 100 pounds, avoirdupois. Where other units of quantity are used, Imperial standards apply.

4. In this Report are trade items such as "Internal combustion engines and parts", etc., etc., which show both quantities and values. In this item "Internal combustion engines and parts" the quantity represents the number of "Complete engines" only, while the value represents not only the value of the specified number of complete engines but also the value of all kinds of "Parts" of engines; therefore, in this item, and in similar items, the average value per unit cannot be ascertained.

5. "Imports" means "Imports entered for Consumption". "Entered for Consumption" does not imply that the goods have been actually consumed in Canada, but that they have passed into the custody of the importer and that duty has been paid on the dutiable portion.

6. For statistical purposes, the value of merchandise imported, as shown in this Report, is the value as determined for Customs duty purposes. In most cases, this would be the invoice value of the goods converted to Canadian dollars at authorized exchange ratios. The value does not include charges such as freight, insurance, handling, duties or taxes.

7. "Exports of Canadian Produce" include not only articles of purely Canadian origin but also imported articles of foreign origin which have been changed in form or enhanced in value by further manufacture in Canada, such as sugar refined from imported raw sugar, and rubber goods made from imported unmanufactured rubber.

8. The value of "Exports of Canadian Produce" is the actual amount received in terms of Canadian dollars exclusive of freight, insurance, handling and other charges.

9. "Exports of Foreign Produce" consist of "Imports entered for Consumption" (see no. 5 above), which have been exported from Canada in the same condition as when imported. The value is the actual amount received in terms of Canadian dollars exclusive of freight, insurance, handling and other charges, when exported from Canada.

10. Imports into Canada are classified as received from the countries whence they were consigned to Canada. The countries of consignment are the countries from which the goods have come, without interruption of transit, except in the course of transshipment or transfer from one conveyance to another. The countries whence goods are consigned are not necessarily the countries of actual origin, since goods produced in one country may be purchased by a firm in another country and thence despatched, after a longer or shorter interval, to Canada. In such cases the

## NOTES EXPLICATIVES

1. Toutes les indications de volume et de valeur que l'on trouvera dans cet ouvrage sont basées sur les déclarations des importateurs et des exportateurs (documents d'importation et d'exportation), subséquemment vérifiées par les fonctionnaires des douanes.

2. Partout où il est question de poids, il s'agit du poids net des marchandises, c'est-à-dire que le poids des emballages, récipients, etc., n'y est pas compris, sauf certaines exceptions énumérées au tarif des douanes.

3. L'expression "ton" signifie 2,000 livres et "cwt." (ou quintal) 100 livres avoirdupois. Lorsqu'on se sert d'autres unités, il convient d'adopter le standard impérial de poids et mesures.

4. Dans ce rapport on trouve des items comme "moteurs à combustion interne et leurs pièces", etc., etc., montrant les quantités et les valeurs. Dans le cas de "moteurs à combustion interne et leurs pièces" la quantité représente le nombre de "moteurs complets" seulement, et la valeur représente non seulement celle des moteurs complets mais aussi celle de toutes les "pièces" de moteurs; c'est pourquoi, dans cet item et autres semblables, il est impossible d'établir la valeur moyenne par unité.

5. "Importations" signifie "importations entrées pour la consommation". "Entrées pour la consommation" n'implique pas que ces marchandises sont nécessairement consommées au Canada, mais qu'elles ont été livrées à l'importateur qui a payé les droits sur telle partie imposable de ces marchandises.

6. Pour des fins de statistique, la valeur des marchandises importées indiquée dans le présent rapport est celle qui a été déterminée pour fins de droits de douane. Dans la plupart des cas, cette valeur sera la valeur de facture des marchandises, convertie en dollars canadiens au taux autorisé du change. Elle ne comprend pas les frais tels que le fret, l'assurance, la manutention, les droits ou taxes.

7. Les "exportations de produits canadiens" comprennent non seulement les articles d'origine purement canadienne, mais aussi les articles importés d'origine étrangère qui ont été modifiés dans leur forme ou augmentés en valeur par une plus ample transformation au Canada, comme le sucre raffiné après avoir été importé à l'état brut, les articles fabriqués avec du caoutchouc brut importé.

8. La valeur des "exportations de produits canadiens" est le montant réel reçu, exprimé en dollars canadiens, à l'exclusion du fret, des assurances, de la manutention et des autres frais.

9. Les "exportations de produits étrangers" comprennent les "importations entrées pour la consommation" (voir le no 5 ci-dessus) qui ont été exportées du Canada dans le même état qu'à leur entrée. La valeur est le montant réel reçu, exprimé en dollars canadiens, à l'exclusion du fret, des assurances, de la manutention et des autres frais, quand les marchandises sont exportées du Canada.

10. Les importations au Canada sont attribuées aux pays d'où elles ont été consignées au Canada. Les pays de consignment sont les pays d'où viennent les marchandises, sans autre interruption de transit que les transbordements inévitables. Les pays d'où les marchandises sont consignées ne sont pas nécessairement les pays d'origine, car les marchandises produites dans un certain pays peuvent avoir été achetées par une firme d'un autre pays, d'où elles peuvent être expédiées au Canada après une période plus ou moins longue. Dans ce cas, l'attribution de ces marchandises est faite au second pays, con-

second country would be the country of consignment to which the goods would be credited. An example is the case of tea grown in the Orient but purchased in the bonded market in London, England; Canadian statistics record such imports as coming from the United Kingdom.

11. Exports from Canada are credited to the country to which they are consigned, whether that country possesses a seaboard or not. The country of consignment is the country to which goods exported from Canada are intended to pass, without interruption of transit, except in the course of transshipment or transfer from one means of conveyance to another.

12. *Ports.*—The Table of the Trade of Canada, by Ports and Provinces, shows that merchandise was imported or exported at these ports; but this does not imply that goods imported at any port were for home consumption there or even in the province in which the port is situated, neither does it imply that goods exported at any port originated there or even in the province in which the port is situated.

13. The initials "N.O.P." mean "not otherwise provided for".

sidéré comme pays de consignation. Il en sera ainsi, par exemple, du thé récolté en Orient mais acheté sur le marché de Londres, Angleterre; les statistiques canadiennes considèrent ces importations comme venant du Royaume-Uni.

11. Les exportations du Canada sont attribuées au pays où elles sont consignées, même si ce pays ne possède pas de port de mer. Le pays de consignation est le pays que les marchandises exportées du Canada doivent finalement atteindre sans interruption de transit autre que les transbordements inévitables.

12. *Ports.*—Le tableau du commerce du Canada, par port et province, montre les marchandises importées ou exportées par ces ports, mais il n'en faut pas conclure que les marchandises importées par un port quelconque sont pour la consommation de la province où est situé le port, ou que les marchandises exportées sont produites par la province où est situé le port de sortie.

13. Les initiales "n.a.é." signifient "non autrement énuméré".

## GOLD IN CANADIAN TRADE STATISTICS

The publication of statistics showing the gross imports and exports of gold has been temporarily suspended as from September, 1939. Statistics for periods prior to this time have been accordingly revised to exclude all gold formerly included in the total of merchandise exports.

Statistics showing the net exports of non-monetary gold, including changes in stocks held under earmark, are published as a supplement to the trade figures, and are given below.

Exports of gold in Canadian trade statistics were distinguished in previous reports as between monetary and non-monetary. Monetary gold exports were described as those which entailed a reduction in the Dominion's monetary gold stocks. All other gold exported (classed as non-monetary) were shown as merchandise, and included with the total merchandise exports.

The fact that gold is a money metal gives it peculiar attributes which distinguish it from other commodities in trade. In particular, the movement of gold in international trade is determined almost exclusively by monetary factors. The amount of exports may fluctuate widely from month to month owing to other than ordinary trade or commercial considerations. In addition, gold is generally acceptable. It does not have to surmount tariff barriers and is normally assured a market at a relatively fixed price. For these reasons, provision was made in previous trade reports for a supplementary table showing exports from Canada excluding all gold.

It is further to be noted that gold does not move in international trade in any direct or normal relation to sales and purchases. It may be bought or sold abroad without moving in or out across the frontier, the sales or purchases in such cases being recognized by simply setting aside or "earmarking" the gold in the vaults of the central bank. Trade statistics deal only with physical movements, sales or purchases of gold which do not involve an actual movement being more properly regarded as an "invisible item" and taken care of in the "International Balance of Payments" statements. Changes in the Bank of Canada's stock of gold under earmark do not enter, therefore, into the trade statistics.

## L'OR DANS LES STATISTIQUES DU COMMERCE CANADIEN

La publication des statistiques relatives aux importations et exportations brutes d'or a été temporairement suspendue depuis septembre 1939. Les statistiques pour les périodes antérieures à cette date ont été révisées en conséquence, de manière à exclure tout l'or qui entraînait auparavant dans le total des exportations de marchandises.

Les statistiques montrant les exportations nettes d'or non monnayé, y compris les changements dans les stocks affectés, sont publiées comme supplément aux chiffres sur le commerce et sont données ci-dessous.

Dans les rapports précédents les exportations d'or dans les statistiques du commerce canadien comprenaient l'or monnayé et l'or non monnayé. Les exportations d'or monnayé y étaient décrites comme celles qui entraînent une diminution des stocks d'or monnayé du Dominion. Toutes les autres exportations d'or (classifié comme non monnayé) étaient regardées comme marchandises et comprises dans les exportations globales de marchandises.

Le fait que l'or est un métal-monnaie lui donne des attributs spéciaux qui le distinguent des autres denrées dans le commerce. En particulier le mouvement de l'or dans le commerce international est déterminé presque exclusivement par des facteurs monétaires. Le volume des exportations peut largement fluctuer d'un mois à l'autre à cause de considérations autres que celles de l'échange et du commerce ordinaires. En outre, l'or est généralement acceptable. Il n'a pas à surmonter les barrières tarifaires, et un marché lui est normalement assuré à un prix relativement fixe. Pour ces raisons les rapports antérieurs sur le commerce fournissaient un tableau supplémentaire sur les exportations canadiennes, à l'exclusion de l'or.

De plus, il faut observer que dans le commerce international l'or ne se déplace pas en relation directe ou normale avec les ventes et les achats. Il peut s'acheter ou se vendre à l'étranger sans entrée ou sortie à la frontière; en ces cas, les ventes ou les achats sont reconnus en mettant simplement de côté ou en "affectant" l'or dans les chambres fortes de la banque centrale. Les statistiques du commerce n'ont trait qu'aux mouvements physiques; les ventes et les achats d'or qui ne comportent pas un mouvement réel sont plus proprement regardés comme un "item invisible", et ils prennent place dans les états de la "Balance des paiements internationaux". Les changements dans les stocks d'or affecté de la Banque du Canada ne paraissent donc pas dans les statistiques du commerce.

1. In this classification the expression "Canadian Farm Products" refers, in the case of Exports, to commodities actually produced in their original form on Canadian farms. In the case of Imports, it covers all commodities of which the basic raw materials are such as Canadian farms produce. "Foreign Farm Products" covers, in both Imports and Exports, materials or commodities such as Canada does not produce, e.g. – cane sugar, tea, rubber, cotton, silk, etc.

1. Dans cette classification, l'expression "Produits des fermes canadiennes" couvre, pour les exportations, toutes les denrées provenant à leur état brut de la ferme canadienne. Dans le cas des importations, elle couvre toutes les denrées dont la matière première est de celles produites par les fermes canadiennes. L'expression "Produits des fermes de l'étranger" couvre, aux importations et aux exportations, les matières ou denrées qui ne sont pas produites au Canada, telles que le sucre de canne, le thé, le caoutchouc, le coton, la soie, etc.
